[What will happen with Ivory Gull this winter?](#)

November 08, 2010

Last January, we published a discussion of recent trends in Ivory Gull that may be early signs of real ecological havoc being wreaked in the species' home range: more vagrancy of adults far to the south of their home range. On 4 Nov 2010 eBirders added one more data point: an adult Ivory Gull at Pismo Beach, California. Below we republish our analysis from last winter with a link to a disturbing video of the Ivory among barefoot beachgoers.

Received June 1, 2009

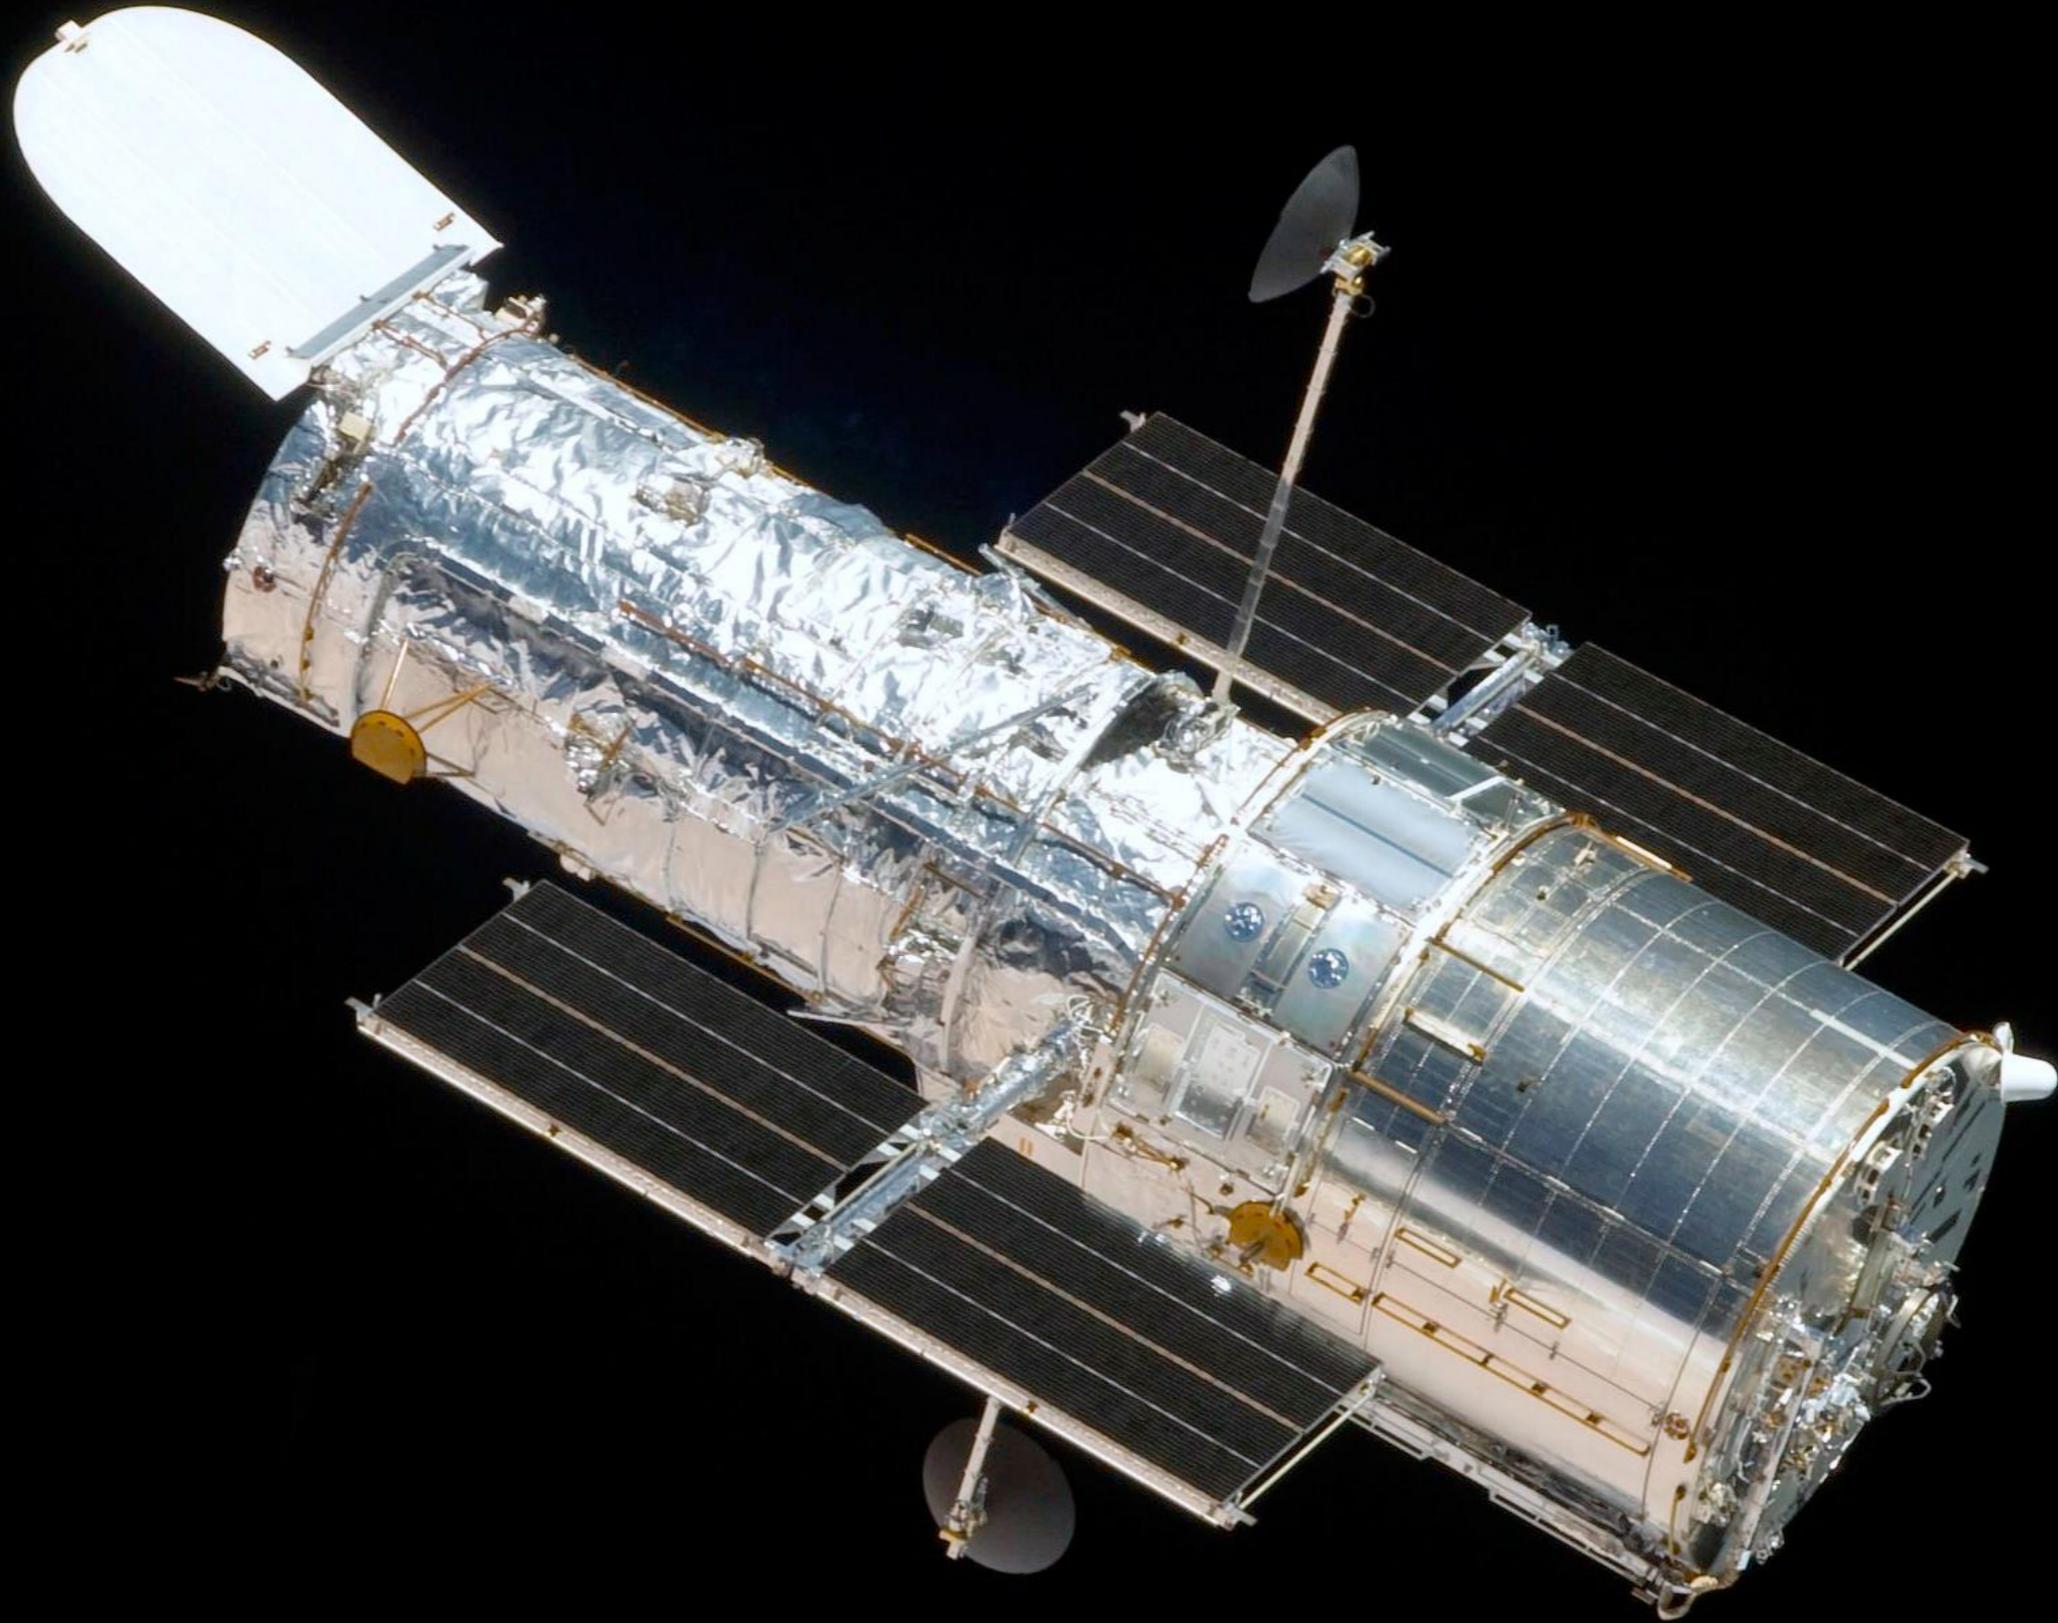

Accepted October 23, 2009

The role of ecology in the origin of species has been the subject of long-standing interest to evolutionary biologists. New sources of spatially explicit ecological data allow for large-scale tests of whether speciation is associated with niche divergence or whether closely related species tend to be similar ecologically (niche conservatism). Because of the confounding effects of

ABSTRACT

We analyze the environmental dependence of galaxy morphology and colour with two-point clustering statistics, using data from the Galaxy Zoo, the largest sample of visually classified morphologies yet compiled, extracted from the Sloan Digital Sky Survey. We present two-point correlation functions of spiral and early-type galaxies, and we quantify the correlation between morphology and environment with marked correlation functions. These yield clear and precise environmental trends across a wide

Abstract

We report the discovery of an unusual object near the spiral galaxy IC 2497, discovered by visual inspection of the Sloan Digital Sky Survey (SDSS) as part of the Galaxy Zoo project. The object, known as Hanny's Voorwerp, is bright in the SDSS *g* band due to unusually strong [O III]4959, 5007 emission lines. We present the results of the first targeted observations of the object in the optical, ultraviolet and X-ray, which show that the object contains highly ionized gas. Although the line ratios are similar to extended emission-line regions near luminous active galactic nucleus (AGN), the source of this ionization is not apparent. The

Crystal structure of a monomeric retroviral protease solved by protein folding game players

Firas Khatib¹, Frank DiMaio¹, Foldit Contenders Group, Foldit Void Crushers Group, Seth Cooper², Maciej Kazmierczyk³, Mirosław Gilski^{3,4}, Szymon Krzywda³, Helena Zabranska⁵, Iva Pichova⁵, James Thompson¹, Zoran Popović², Mariusz Jaskolski^{3,4} & David Baker^{1,6}

Following the failure of a wide range of attempts to solve the crystal structure of M-PMV retroviral protease by molecular replacement, we challenged players of the protein folding game Foldit to produce accurate models of the protein. Remarkably, Foldit players were able to generate models of sufficient quality for successful molecular replacement and subsequent structure determination. The refined structure provides new insights for the design of antiretroviral drugs.

Foldit is a multiplayer online game that enlists players worldwide to solve difficult protein-structure prediction problems. Foldit players leverage human three-dimensional problem-solving skills to interact with protein structures using direct manipulation tools and algo-

Structure Prediction (CASP) experiment was an ideal venue in which to test this. CASP is a biennial experiment in protein structure prediction methods in which the amino acid sequences of structures that are close to being experimentally determined—referred to as CASP targets—are posted to allow groups from around the world to predict the native structure (<http://predictioncenter.org/casp9/>). Each group taking part in CASP is allowed to submit five different predictions for each sequence. Foldit participated as an independent group during CASP9 and made predictions for the targets with fewer than 165 residues that the CASP organizers did not indicate as oligomeric. For targets with homologs of known structure—the Template-Based Modeling category—Foldit players were given different alignments to templates predicted by the HHpred server³ via the new Alignment Tool. Despite these new additions to the game, the performance of Foldit players over all CASP9 Template-Based Modeling targets was not as good as those of the best-performing methods, which made better use of information from homologous structures; extensive energy minimization used by Foldit players tended to perturb peripheral portions of the chain away from the conformations present in homologs.

For prediction problems for which there were no identifiable homologous protein structures—the CASP9 Free Modeling category—Foldit players were given the five Rosetta Server CASP9 submissions (which were publicly available to other prediction groups) as starting points, along with the Alignment Tool. Here all five starting models were

Jupiter Observing Season

The current season for observing Jupiter's radio emissions began in November, 2015. Jupiter is now in the pre-dawn skies and the Earth's ionosphere is generally transparent to 20 MHz signals. Several radio noise storms have been observed - we encourage all observers to submit their observations to the Jove archive. At transit, Jupiter reaches

Our Challenge

NASA's Kepler spacecraft is one of the most powerful tools in the hunt for extrasolar planets. The Kepler team's computers are sifting through the data, but we at Planet Hunters are betting that there will be planets which can only be found via the remarkable human ability for pattern recognition.

Open University of Israel

From Wikipedia, the free encyclopedia

Coordinates: 32°11′19.21″N 34°53′16.09″E﻿ / ﻿﻿ / ﻿

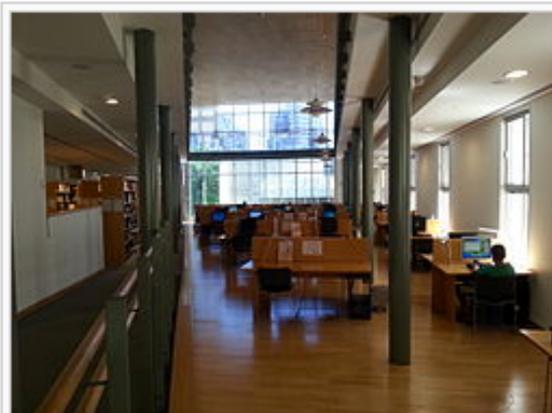

The **Open University of Israel** (**Hebrew**: האוניברסיטה הפתוחה, *HaUniversita HaPtukha*) is a **distance-education university** in **Israel**. Its administration center is located in the city of **Ra'anana**. As of 2006, the Open University had taught around 39,000 students.

The university has more students than any other academic institution in Israel, coming from all over the world. The university is accredited to award **undergraduate** and **postgraduate** degrees, diplomas and certificates.

History [edit]

Library of Open University of Israel

The Open University of Israel was conceived in 1971 and founded in 1974, modeled after the UK's **Open University**. The first semester of studies commenced on October 17, 1976. In 1980, the Open University was officially recognized as an institute of higher learning in Israel, and was accredited to award undergraduate or bachelor's degrees (BA). In 1982, 41 graduates were awarded BA diplomas at the university's first diploma ceremony.

By 1987, the university had 11,000 students and offered 180 courses. The university grew rapidly and by 1993, it had 20,000 students and 300 courses, and 405 new graduates. Then, in 1996, the university launched its postgraduate program offering courses towards a master's degree (MA). By 2002, the university had grown to 36,710 enrolled students and by 2003, more than 13,000 people had graduated the university with an academic degree.

In 2010, the Open University began offering online courses taught in Russian. Students could enroll worldwide for 24 courses, most of them with Israeli or Jewish content. According to the online program, examinations can be held at Israeli consulates and **Jewish Agency** offices around the world.^[2]

Undergraduate studies [edit]

The Open University is open to anyone who wishes to study towards a **bachelor's degree**, without any prerequisites or screening process. However, the Open University still has high standards and demands academic achievements from its graduates. Another way in which the Open University is *open* is in the study path it offers to its students. When enrolling in the university, the student does not need to decide the primary focus of his or her degree, nor to

Do all courses require some face-to-face teaching? [edit]

"Open university" is sometimes used for distance learning universities (e.g. [Open Universities Australia](#)) which offer some courses with no face-to-face requirement. I did a history course with [Open Universities Australia](#) while not even in Australia. Does the [Open University of Israel](#) have such courses? It might be good to clarify this. --[Singkong2005](#) ^{talk} 05:55, 1 August 2006 (UTC)

It is possible, though it is not common, for people abroad to study in the Open University. They have to pay slightly more for that privilege, have no classes and have to take their tests in the Israeli Embassy, though. [Simpsonary](#) 15:18, 9 February 2007 (UTC)

It is also possible for local students to study without face to face teaching, and attending only the final exams. [Liransh](#) 19:04, 17 May 2007 (UTC)

Fair use rationale for Image:Open university israel logo.jpg [edit]

Image:Open university israel logo.jpg is being used on this article. I notice the image page specifies that the image is being used under [fair use](#) but there is no [explanation or rationale](#) as to why its use in **this** Wikipedia article constitutes fair use. In addition to the [boilerplate fair use template](#), you must also write out on the image description page a specific explanation or rationale for why using this image in each article is consistent with [fair use](#).

Please go to [the image description page](#) and edit it to include a [fair use rationale](#). Using one of the templates at [Wikipedia:Fair use rationale guideline](#) is an easy way to insure that your image is in compliance with Wikipedia policy, but remember that you must complete the template. Do not simply insert a blank template on an image page.

A-5 duplicates A-3

Is C the community producing the data or the community the data are about? I guess the later, but it could be clarified.

It might be useful to separate Ethics from IRB compliance. For the later, using the definitions from the IRB for things like human subjects would be good. Of course, that would be only a US view; I don't know the other rules.

DS-2: what about datasets that aren't published.

Minor typo: D3-6 should be DS-6

DS-6 suggests the need for a taxonomy of processing levels like <http://uregina.ca/piwowarj/Think/ProcessingLevels.html>

Optional DS-4 and DS-5 reuse the numbers

Optional DS-5 is the start of a bigger category of Provenance. That could even include pointers to the scripts used, the settings, etc.

- ## About
- Staff
 - Job Opportunities
 - History

The Alliance for Aquatic Resources Monitoring (ALLARM) envisions people who are empowered through science education to participate in decision making about water resources in their local community. ALLARM is a program of Dickinson College that achieves its mission by providing an enhanced educational experience for Dickinson students to learn fundamental environmental, community engagement, science education, and non-profit skills.

We engage communities to use science as a tool to investigate the health of their streams and to use the data they generate for aquatic protection and restoration efforts. ALLARM has provided capacity building assistance to Pennsylvania communities to monitor, protect and restore local waterways since 1986.

THE EFFECT OF A GW IS SO MINUSCULE AND EASILY CONFUSED WITH RANDOM NOISE, YOU NEED A SMART DATA ANALYSIS TECHNIQUE.

SCIENTISTS HOPE TO IDENTIFY THE PATTERNS OF GRAVITATIONAL WAVES BY COMPARING THE WIGGLES THEY MEASURE IN THE EXPERIMENT TO THE WIGGLES THEY EXPECT FROM GRAVITATIONAL WAVES.

IT'S LIKE TRYING TO IDENTIFY A SONG BEING HUMMED AT A NOISY PARTY. A VERY VERY NOISY PARTY.
